

HI^{AI} - Human Intelligence Powered by Artificial Intelligence

What is HI^{AI}?

At NuSummit, HI^{AI} is more than a tagline—it is our operating principle. We see the future of BFSI in HI^{AI} —Human Intelligence powered by Artificial Intelligence. It's not about replacing people but augmenting human insight with AI's speed, scale, and precision. We don't treat AI as an experiment but as a strategic enabler for solving real business problems with measurable outcomes. By placing Human insight at the forefront of AI, we build solutions that:

- **Amplify expertise** with advanced reasoning, not replace it.
- **Embed ethics and compliance** from day one.
- **Adapt and scale** through modular architecture.
- **Drive clear ROI**, balancing innovation with cost control.

In the Spotlight: From Hype to Impact

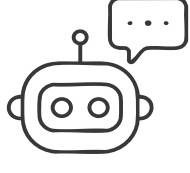

ThoughtHive S2 | Ep. 4 (AMA)

From Hype to Impact: Gen AI's role in BFSI

Hallucination vs. accuracy? RAG for real-time threat analysis? Dr. Jai Vishwakarma cuts through the buzz to reveal how financial teams can harness Gen AI for trusted, secure, and ROI-driven outcomes.

Top AI Trends Shaping Finance in 2025

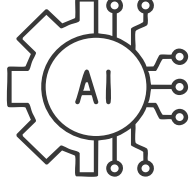

The Generative AI Revolution

Beyond simple chatbots, GenAI now powers strategy modelling, personalized portfolio optimization, and dynamic customer analytics, reshaping front- and back-office workflows.

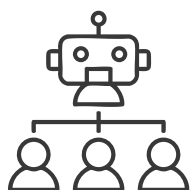

Advanced Reasoning and Decision Intelligence

AI systems are evolving from pattern recognition to strategic insight engines, surfacing actionable recommendations in areas like credit risk, trading strategy, and treasury management.

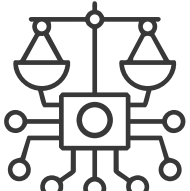

AI-Specific Infrastructure and "AI Factories"

Financial firms are investing in specialized compute (e.g., ASICs, optimized GPU clusters) and building "AI factories"—centralized platforms for rapid model development, testing, and deployment.

Multimodal AI

Multimodal AI enhances KYC, enriches fraud detection, and delivers richer customer engagement insights across channels by integrating text, voice, image, and transaction data.

Explainable AI and Governance (XAI)

With the EU AI Act in force and global regulators demanding transparency, Explainable AI frameworks—bias detection, model-audit trails, and interactive "why" reports—are now table stakes.

AI-Powered Cybersecurity Resilience

Beyond fraud detection, AI drives threat intelligence, anomaly detection in network logs, and adversarial-attack defense to safeguard data and AI pipelines.

Strategic ROI Measurement for AI

Organizations are formalizing ROI frameworks that tie AI investments (compute, data, talent) directly to business metrics, ensuring innovation budgets deliver measurable impact.

Bringing HI^{AI} to Life

NuSummit's integrated platform maps directly to these trends, ensuring each modular solution is human-first, responsible, outcome-focused, and democratized:

Strategic AI Roadmaps

We help you assess infrastructure needs (including specialized AI compute), define "AI factory" processes, and establish ROI-centric governance frameworks so that every dollar spent drives strategic value.

AI Solutions Built for Financial Operations

From **automated KYC and policy servicing** to **AI-driven underwriting, risk, and fraud analytics**, NuSummit's AI solutions help financial institutions automate routine tasks, enhance accuracy, and accelerate time-to-decision across the value chain.

Domain-Specific Models and Copilots

ComplianceGPT embeds RAG-powered pipelines to ground outputs in live rulebooks. **Equity Insights** fuses multimodal data (news, filings, sentiment) for richer investment analysis.

Smooth Deployments

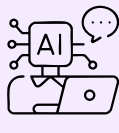

Checkmate (secure code review), **Testament** (automated testing), and **Pairwise** (app generation) serve as your internal "AI factory," accelerating safe, compliant deployments.

Next Steps

Identify which trends resonate with your strategic priorities.

Pilot a focused HI^{AI} use case, whether it's an agentic credit-assistant, RAG-compliant reporting, or multimodal KYC, to prove value quickly.

Scale using our modular platform and embedded governance to transform core processes.

Let's collaborate to elevate your human expertise with AI precision, embedding HI^{AI} at the heart of your finance operations.
